Flottweg Donates Again to Clean Drinking Water

Flottweg Separation Technology, Inc. will be supporting the Design Outreach organization's Give Water Gala once again this year. The event, a donation campaign that will be used to support the LifePump project, will be held on the evening of September 20 in Columbus, Ohio. LifePump installs manually operated water pumps in developing countries to provide the population there with clean drinking water.

Human lives are absolutely dependent on access to clean drinking water. Design Outreach has therefore taken on the objective of supporting developing countries by providing new sources of drinking water. The LifePumps used in this project will reach water layers deep underground that are not accessible with conventional pumps. This germ-free water needs no further processing by chemicals or filters. Solid construction also guarantees a long-term supply.

Clean water is an important pillar of corporate success at Flottweg. Flottweg products in many sewage treatment plants around the world ensure that wastewater is processed and returned to circulation as pure as possible. At IFAT 2018 in Munich, the world's largest environmental trade show, Flottweg will present its latest municipal and industrial clarification systems series. The Xelletor series achieves a higher degree of separation than conventional wastewater centrifuges, significantly reducing the consumption of polymer flocculants and power.
